

berry

Tinder **for events**

TUM Startup Launchpad SS26

Too many sources, **too little signal**

01

Fragmented discovery

Listings are scattered across different event platforms with no single no single platform capturing the full range of events, from educational to sports to nightlife.

02

Decision paralysis

Without knowing what friends are interested in, browsing turns into scrolling, and scrolling rarely ends in a plan.

03

Coordination friction

Even when an event is found, confirming who is actually going going happens in slow, buried group chat threads.

From **discovery** to plans, in one swipe

1 Open a single feed aggregating Luma, RA, and Eventbrite

2 Swipe right on events that match your interests

3 See instantly which friends swiped the same event

4 Coordinate and go, no group chat needed

From **discovery** to plans, in one swipe

- 1 Open a single feed aggregating Luma, RA, and Eventbrite
- 2 Swipe right on events that match your interests
- 3 See instantly which friends swiped the same event
- 4 Coordinate and go, no group chat needed

A €7.5M market, narrowing to a credible foothold

TAM All students, 5 German university cities

SAM Socially active students reachable via app-based discovery discovery

SOM 40K users · 120 organiser partners by Year 3

Everyone owns half the problem. **Discovery** or **social**, never both.
never both.

WITH BERRY

TONIGHT

Rooftop Sessions

● +12 friends swiped right

1 feed. 1 swipe. A plan made.

Too many sources, **too little signal**

01

Fragmented discovery

Listings are scattered across Luma, Resident Advisor, and Eventbrite, with no single feed built for students.

02

Decision paralysis

Without knowing what friends are interested in, browsing turns into scrolling, and scrolling rarely ends in a plan.

03

Coordination friction

Even when an event is found, confirming who is actually going happens in slow, buried group chat threads.

Feature by feature, nobody covers **discovery and social** together. together.
